

Uterine Torsion: A barn guide to detection and management

This class uses many avenues of learn to help the participant truly understand the problem and have the skill to be able to correct it in the absence of a veterinarian. This is an active class, with the participant working in teams to learn how to use the FLANK to PLANK Method correctly.

Class Outline;

- What is Uterine Torsion
- What are the causes of UT
- When can it occur
- Signs and Symptoms of UT
- Complications than can occur as a result of UT
- Diagnosis and Methods of Correction
- Ways to lessen the likelihood of UT
- PLANK to FLANK Method of Correction
- Hands on experience to learn this important field method
- Post Manipulation Management
- Outcomes and Statistics

Supplies to be provided by the hosting farm or participants:

One 1 x 10 x 24 inch pine board for each participating farm.
White board and colored markers

3 hour workshop
